PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 3+ years of hands-on experience architecting AWS cloud-native infrastructure, operating Kubernetes (EKS) platforms, and building Jenkins/GitHub Actions CI/CD and GitOps (ArgoCD) automation pipelines. Delivered 40% faster release cycles and 60% faster infrastructure provisioning through Terraform based IaC, while sustaining 99.5%+ application uptime and cutting MTTD by 35% via a Prometheus, Grafana observability stack. Experienced in DevSecOps practices, integrating SonarQube, Trivy, and OWASP scanning into CI pipelines and skilled in Docker containerisation, Python/Bash scripting, on-call production support, and incident response.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS - EC2, VPC, IAM, S3, RDS, DynamoDB, Lambda, EKS, CloudFormation, CloudWatch, Route 53, Auto Scaling, ALB, Load Balancing | Cloud Cost Optimisation (right-sizing, Reserved/Spot instances)
- **DevOps & Automation:** CI/CD Pipelines, Jenkins, GitHub Actions, Terraform, Ansible, Infrastructure as Code (IaC), Release Engineering
- **GitOps & Containers:** Docker, Kubernetes (EKS), Helm, ArgoCD, GitOps Workflows, Container Registry (ECR), Microservices Deployment, Zero-Downtime Rolling Updates
- **DevSecOps & Security:** Trivy (container/image scanning), SonarQube (static code analysis), OWASP Dependency-Check, IAM Least-Privilege Policies, Secrets Management
- **Observability & SRE:** Prometheus, Grafana, AWS CloudWatch, SLA/SLO Monitoring, Alerting & Incident Detection, On-Call Support, Log Analysis, Root Cause Analysis, Incident Response, SRE Practices
- **Scripting & Tools:** Python, Bash, Linux Administration, Git, MySQL, Shell Scripting, Automation Tooling
- **Methodologies:** Agile/Scrum, Continuous Delivery, Production Support, Capacity Planning, High Availability, Fault Tolerance

PROFESSIONAL EXPERIENCE

DevOps Engineer | TTC Holidays | Pune, Maharashtra **Jul 2023 – Jul 2026**

- Sustained 99.5%+ application uptime and cut mean time to detect (MTTD) incidents by 35%, as measured by CloudWatch and Grafana alerting dashboards, by engineering proactive monitoring across AWS infrastructure (EC2, Lambda, RDS) using CloudWatch, Prometheus, and Grafana.
- Accelerated release cycles by 40% and enabled zero-downtime rolling updates, as measured by deployment frequency metrics, by architecting Jenkins CI/CD pipelines with GitOps-driven (ArgoCD) automated rollback for containerised EKS deployments.
- Reduced infrastructure provisioning time by 60% and eliminated configuration drift, as measured by environment setup logs, by designing reusable, modular Terraform IaC with remote state management alongside Ansible playbooks across dev, staging, and production.
- Cut manual operational effort by 50%, as measured by reduced deployment ticket volume, by building Python and Bash automation tooling for deployment workflows, environment health checks, and lifecycle management, freeing engineering capacity for platform improvements.
- Reduced cloud spend by 20% and eliminated over-permissioned IAM roles across 3 AWS accounts, as measured by monthly cost reports and IAM access audits, by enforcing least-privilege policies, centralizing secrets management, and migrating eligible workloads to Reserved/Spot instances.

PROJECTS

Secure CI/CD to AWS ECS Fargate with Blue-Green Deployments

- Built a GitHub Actions CI/CD pipeline that tests, scans (Bandit, pip-audit, Trivy) and deploys a containerised API to ECS Fargate, authenticating to AWS via OIDC with no stored access keys and a role restricted to the main branch.
- Implemented zero-downtime blue-green releases with AWS CodeDeploy and automatic rollback, provisioning the full stack (VPC, ALB, ECS, ECR, IAM) with Terraform and S3 remote state locking; validated that a vulnerable dependency is blocked and a bad release is rolled back.

End-to-End DevSecOps CI/CD Pipeline on AWS EKS

- Architected AWS infrastructure (IAM, security groups, EC2, multi-node EKS cluster) using modular Terraform for repeatable, automated provisioning.
- Built a Jenkins CI/CD pipeline integrating SonarQube, OWASP Dependency-Check, and Trivy as security gates, with GitOps-based delivery to EKS via ArgoCD.
- Deployed Prometheus and Grafana for cluster and application observability, with automated pipeline notifications.

End-to-End CI/CD and Kubernetes Deployment on AWS

- Cut deployment lead time by 45%, as measured by Jenkins pipeline execution logs, by architecting a fully automated Terraform-provisioned EKS platform (EC2, VPC, IAM, Route 53) and replacing manual release steps with containerized Jenkins CI/CD workflows.
- Cut average incident resolution time by 30%, as measured by alert-to-resolution tracking, by implementing a Prometheus and Grafana observability stack alongside CloudWatch alarms for proactive incident detection.

CERTIFICATIONS (In Progress)

AWS Certified Solutions Architect – Associate

EDUCATION

Bachelor of Engineering - Computer Science and Engineering | Pune Aug 2019 – Jul 2023
